

Style Advisor Performance Analysis

Prepared by-Jyoti Yadav

Batch-164

Tools used-Microsoft Excel

Introduction: -

This project analyzes the performance of Style Advisors using evaluation data collected from different zones. The objective is to assess employee performance, identify high-performing regions, and provide insights through data analysis and visualizations. Excel tools such as formulas, Pivot Tables, and charts were used to transform raw data into meaningful business insights.

Objectives: -

- Analyze Evaluation Scores of Style Advisors.
- Categorize employees into performance groups.
- Compare average Evaluation Scores across zones.
- Identify the zone with the highest percentage of High Performers.
- Visualize the findings using charts and graphs.
- Provide recommendations for improving performance.

Methodology

The project was completed using Microsoft Excel by applying data analysis techniques and visualization tools. The following methodology was adopted:

1.Data Preparation

- The dataset was reviewed and organized to ensure that all records were available for analysis.
- Relevant columns such as Evaluation Score and Zone were identified for further analysis.

2. Performance Grading

- A new column named Performance Grade was created using the IF formula in Excel.
- Based on the Evaluation Score, employees were classified into:
 1. High Performer
 2. Average Performer
 3. Low Performer
 4. Bottom Performer

3. Pivot Table Analysis

- A Pivot Table was created to calculate the Average Evaluation Score by Zone.
- This helped compare the overall performance of different regions.

Row Labels	Average of Evaluation_Score
East	71.57142857
North	76.73684211
South	66.61111111
West	71.82352941
Grand Total	71.78688525

4.Bar Chart

A Bar Chart was prepared using the Pivot Table results to visually compare the average Evaluation Scores across all zones.

5.High Performer Analysis

- Another Pivot Table was created to calculate the percentage of High Performers in each zone.
- This analysis identified the region with the highest proportion of top-performing Style Advisors.

Row Labels	Average Performer	Bottom Performer	High Performer	Low Performer	Grand Total
East	14.29%	14.29%	28.57%	42.86%	100.00%
North	47.37%	5.26%	21.05%	26.32%	100.00%
South	38.89%	16.67%	11.11%	33.33%	100.00%
West	58.82%	17.65%	11.76%	11.76%	100.00%
Grand Total	44.26%	13.11%	16.39%	26.23%	100.00%

6. Pie Chart

A Pie Chart was created to represent the percentage distribution of High Performers among the different zones, making regional comparison easier.

7. Performance Trend Analysis

A Line Chart was prepared using the Evaluation Date and Average Evaluation Score to study performance trends over the available time period.

9. Performance Distribution Analysis

A Stacked Bar Chart was created to compare the distribution of High, Average, Low, and Bottom Performers across different zones.

Row Labels	Average Performer	Bottom Performer	High Performer	Low Performer
East	1	1	2	3
North	9	1	4	5
South	7	3	2	6
West	10	3	2	2

Key Findings

- The performance of Style Advisors was analyzed using Evaluation Scores.
- North Zone recorded the highest average Evaluation Score (76.74).
- South Zone recorded the lowest average Evaluation Score (66.61).
- East Zone had the highest percentage of High Performers (28.57%).
- The analysis showed differences in performance across various zones.

Conclusion

This project successfully analyzed the performance of Style Advisors using Microsoft Excel tools such as IF formulas, Pivot Tables, and charts. The analysis helped identify the average Evaluation Scores across different zones and determine the region with the highest percentage of High Performers. Various visualizations, including Bar Charts, Pie Charts, Line Charts, Heatmaps, and Stacked Bar Charts, made the data easier to understand and interpret.

Overall, the project demonstrates how data analysis can support better decision-making by highlighting strengths, identifying areas for improvement, and providing actionable insights. The findings and recommendations can help management improve employee performance and enhance customer experience.

Thankyou
